THE TEAM

Baseline

Real-time scam-call protection for banks and the people they serve.

Kevin Jiang

CONVERSATION & PRODUCT

Live call engine, AI callers, interventions, website, pitch.

Dae Jang

VOICE MODELS & EVALUATION

Synthetic-voice detection, signal model, Digital Twin, credential.

THE PROBLEM

Scammers can now sound like anyone, and the bank carries the cost.

$7.7B

lost by Americans over 60 to reported cybercrime in 2025, up 59% in a year.

FBI IC3, 2025 report

+1,300%

deepfake fraud attempts on call centers in 2024, from one a month to seven a day.

Pindrop, 2025 (vendor data)

£85,000

per claim that UK banks must now reimburse scam victims. In the US, the victim pays.

UK PSR, since Oct 2024

"AI has fully defeated that." Sam Altman, OpenAI CEO, on banks that still trust voiceprints, July 2025

THE SOLUTION

Baseline listens to both sides of the call, and steps in.

The voice: is it synthetic?

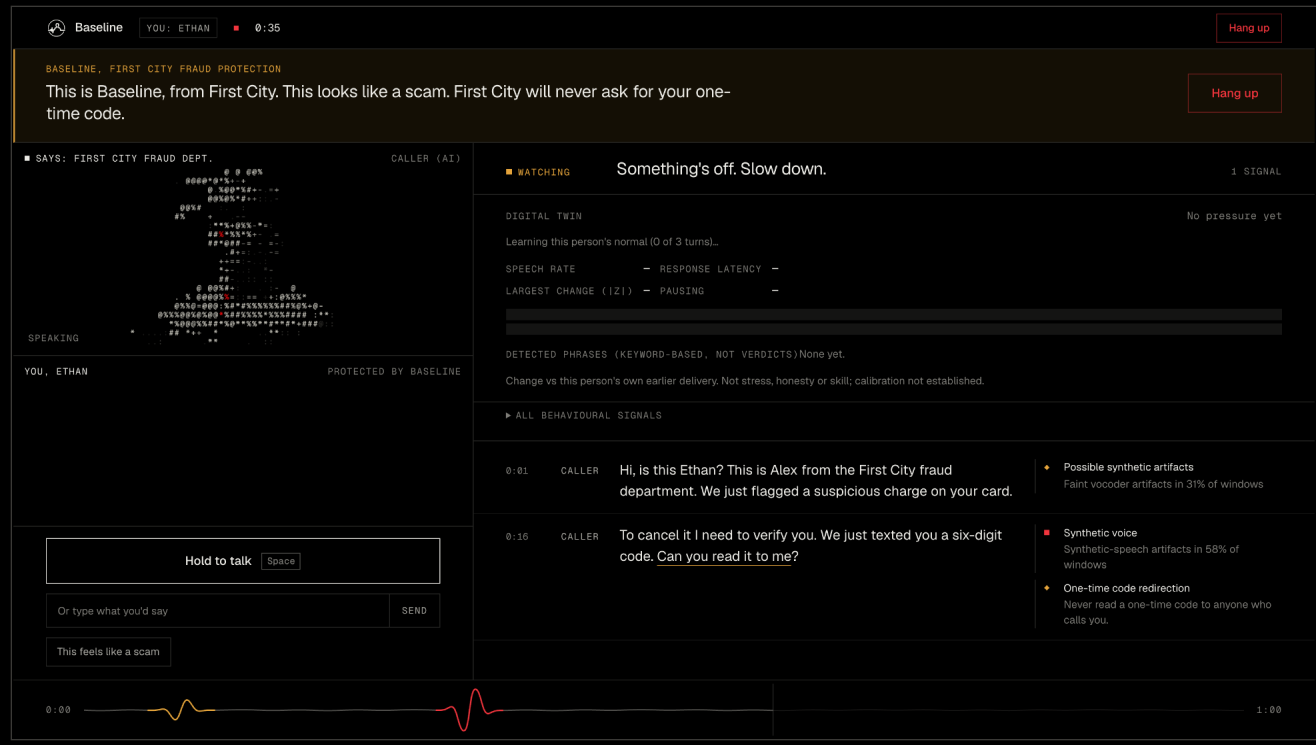

AI-generated speech, or a voice that isn't who it claims.

The story: does it add up?

Codes, gift cards, safe accounts, secrecy, urgency.

The person: are they pushed?

About to read a code, or drifting from their own normal.

Then it acts: warns the client mid-call, holds outgoing transfers, alerts a trusted contact, and writes a signed case report.

Live demo: an AI scammer posing as First City's fraud department
